

UI Automation Assignment

The purpose of this assignment is to understand your abilities around UI Automation, Automation Best Practices, OOP (Object Oriented Programming), and Automated Testing.

Choose whatever object oriented programming language and automation framework that you are most familiar with.

This exercise should not take more than a couple of hours but spend as much time on it as you feel comfortable.

Instructions:

1. Create a new public repo on GitHub or Bitbucket (You can create a free account in either service).
 - a. Name your repo, "firstname_lastname_teladoc_challenge"
2. Using a BDD automation framework of your choice, write some automated tests to validate the scenarios below.
3. Add a README to your repository with instructions on how to run your tests
4. This project will be used as a vital part of the following phase of the interview process. Please use whatever tools you are most comfortable but be prepared to share your screen to present/execute your working code and to expand upon it with the panel

Webtables Automation

Story:

As an Engr. Candidate

I need to automate <http://www.way2automation.com/angularjs-protractor/webtables/>

So that I can show my awesome automation skills

Scenario 1

Add a user and **validate** the user has been added to the table

Scenario 2

Delete the user "novak" from the table and **validate** the user has been deleted.
